CENTRALIZED CALL ACCOUNTING…WITH CALL@Vantage!

your revenue - you control it

CALL@Vantage, the new call accounting software product by Hitachi Telecom, offers Hotel Chains and Management Companies the opportunity to centralize and greatly simplify the management of call accounting for their properties. When deployed in a "campus" configuration, CALL@Vantage can use a single, centralized server, located perhaps at company headquarters, to provide call accounting for multiple, widely-spread properties. Priced call records are sent back to the appropriate local Property Management Systems.

When used in a campus configuration, billing rates and all software features can be applied uniformly, or customized to each property's needs. Features include flat rate pricing, V&H distance sensitive pricing, bubble pricing, unlimited pricing tiers, Call Chaining, multiple VIP pricing levels, user-customizable reports, and Tenant Billing to name just a few.

Gone are multiple call accounting products. Gone are multiple personnel administering data for each local call accounting system. Gone are multiple service contracts. Gone are the problems of retrieving relevant data from each property. In short, gone are the headaches of managing a large, heterogeneous collection of far flung systems.

When considering the implementation of this type of network, a primary concern is reliability.   CALL@Vantage stands up to the test. It can be configured with several levels of buffering and/or redundancy at each local property to provide a system that is reliable.

Stop trying to manage the unmanageable. For more information about CALL@Vantage and centralized call accounting, call your Hitachi Telecom Authorized Distributor and we will work with him or her to customize a network to your specifications. Or call us at **1-800-446-8820 (choose option 1)**
